NEW WAYS OF WORKING

DESIGNERS

Flemming Busk, architect MAA, MDD
Stephan Hertzog, designer AD, MDD

Winners of several Red Dot Product Design awards, IF product Design awards, Danish Furniture Prize 2008 and tripple 2009 Design Award of the Federal Republic of Germany Nominee.

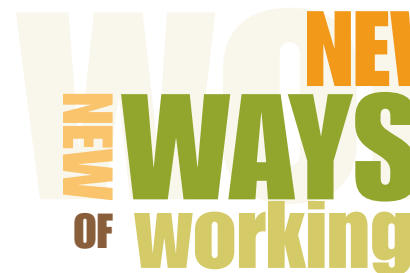

Vindere af flere Red Dot Produkt Design priser, IF Produkt Design priser, Møbelprisen 2008 samt nomineret tre gange til Design Prisen 2009 af den tyske regering.

NEW WAYS OF WORKING

COVER is designed to make solutions where ergonomics and flexibility are key words. Storage can be integral part of COVER, which is space saving in itself. The integral workstations benefit the user of having possibilities of changing work position several times during the day. All together it makes the COVER reception the best solution for both user and visitor.

COVER er tiltænkt løsninger, hvor der lægges vægt på ergonomi og fleksibilitet for den enkelte medarbejder.

Kombinationen af integreret arkivering og arbejdsplads er både pladsbesparende, og kan være med til at sikre sig, at medarbejderen skifter arbejdsstillinger i løbet af dagen. Siddende ekspeditioner er både uhøflige såvel som ergonomisk u hensigtsmæssige. COVER har løsninger, hvor både kunde og bruger opnår bedst mulig kontakt.

COVER is designed to make solutions, where ergonomics and flexibility are key words. Storage is an integral part of the three COVER units illustrated (to the left). At the same time, the front desk in the middle is a natural first contact point to the customer. All front desks are available with or without a front shelf in hardened glass.

COVER er tiltænkt løsninger, hvor der lægges vægt på ergonomi og fleksibilitet for den enkelte medarbejder. Den viste løsning indeholder integreret arkivering i alle tre moduler. Den midterste frontdisk virker samtidig, som et naturligt første kontaktpunkt til kunden. Alle frontdiske kan leveres med eller uden taskehylde i hærdet glas.

design: busk+hertzog

When placing several units in succession, cables and wires can be led from top to floor along the connectors between the units. The units shown to the left are also available without glass tops.

Ved sammenstilling af flere moduler i en række kan ledninger og kabler ledes fra top til gulv langs med afstandsstykkerne mellem moduler. De viste moduler til venstre kan ligeledes leveres uden topplader i glas.

The combination of counters and flexible front desks makes it possible to use sit/stand desks in the reception creating a natural service environment. All units are available in white, anthracite, maple and beech laminates. Front desks are also available with walnut front.

Kombination af skrankevægge og fleksible frontdiske giver mulighed for anvendelse af sidde/stå borde i receptionen samt giver et naturligt ekspeditionsområde. Alle moduler kan leveres i hvid, antracit, ahorn og bøgelaminat. Front diske kan endvidere leveres med front i valnød.

Counters in combination with sit/stand desks and desks with static height. In order to make more room for service, one or two front desks can be fitted on the counters according to your needs. The front desks can be placed independent of each other.

Skrankevæg til afgrænsning af sidde/ståborde eller almindelige skriveborde. For at give bedre ekspeditionsplads kan væggene påmonteres en eller to frontdiske alt efter behov. Frontdiskene kan placeres uafhængigt af hinanden.

If you use electric height adjustable desks, e.g. FUMAC Switch desking, the height adjustability of the electric driven desks is coded to not exceeding the top of counter (110 cm). For safety reason, the allowed maximum size of electric height adjustable desks is 170 cm. Static height or manual height settable desks are 175 cm.

Anvender man elektrisk højdejusterbare borde fra f.eks Fumacs Switch serie, vil bordene være programmeret til ikke at køre højere end kanten af skrankevæggen (110 cm). Maks bordstørrelse tilladt for elektriske højdejusterbare borde er af sikkerhedsgrunde 170 cm i bredden. Anvendes traditionelle skriveborde er maks længden 175 cm.
